

# National Promotional Institution of the Netherlands

*Nuclear Innovation Conference  
2026*

## About Invest-NL

Based in Amsterdam with over 150 highly skilled professionals

We are a state-backed private impact investor (fund of c. EUR 3bn)

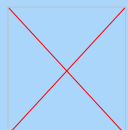

As a National Promotional Institute (NPI), we attract EU capital and foster a sustainable and circular economy in the Netherlands through investments and business development

We aim for a transition to a 100% carbon neutral and circular economy in 2050. We are impact driven: impact is our goal, return is our means

With focus on sustainability and innovation for the Dutch economy, we are accelerating major societal transitions

# Our approach

In societal transitions, promising innovations often face obstacles related to financing, infrastructure or legislation. As the Dutch National Promotional Institution, we address these financing challenges by:

## Financing

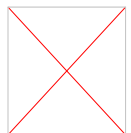

We invest directly and indirectly in innovative businesses and projects.

## Market development

With our expertise and network, we solve financing challenges.

## Financial instruments

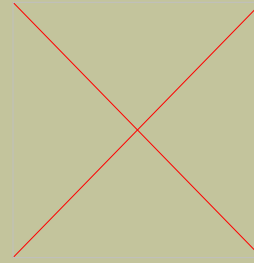

Where the market does not provide suitable financing instruments, Invest-NL develops them itself.

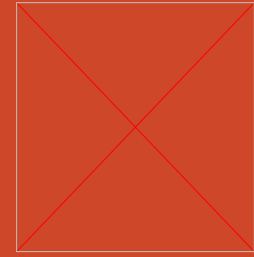

# Who we work with

Driving progress requires innovative entrepreneurs and projects. When the risk appears high and the market hesitates, more is needed to set transitions in motion.

We focus on innovative businesses – from start-ups to established companies – as well as project developers and funds that move the Netherlands forward.

## Investment by Invest-NL

Invested to date: EUR 11.6m

Instrument: Equity

1st investment: 2022

Sector: Energy – nuclear

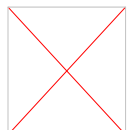

Co-investors: Positron Ventures, PDENH, Impuls Zeeland, HNWI

## Company

- Founded in 2018; headquartered in Amsterdam with approximately 40 FTEs across offices in Amsterdam, Eindhoven and Lyon (FR)
- Developer of cartridge-based molten salt reactor (MSR) technology.
- Received a €10 million France 2030 grant from the French government to accelerate reactor development.
- Signed an MoU with Dutch energy and nuclear stakeholders to develop what could become Europe's first commercial molten salt reactor, with a demonstrator planned in Petten at NRG and the FOAK in Borssele at EPZ.

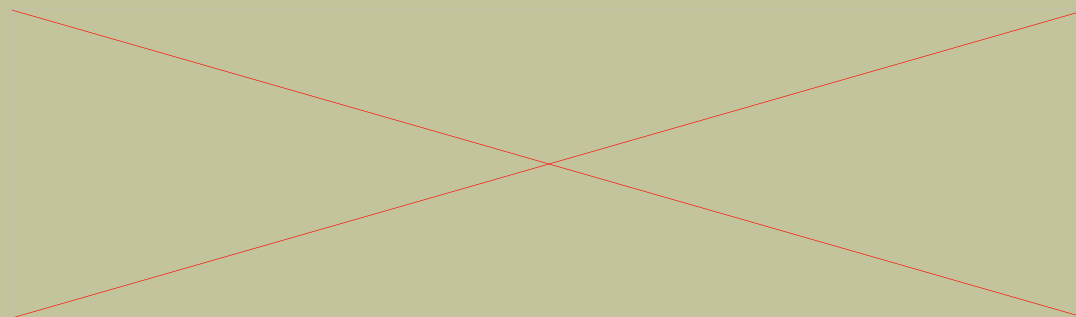

## Technology & roadmap

- Advanced developer of next-generation small modular molten salt reactors for reliable, zero-carbon energy generation.
- Innovative cartridge-based reactor architecture mitigates critical materials degradation challenges and simplifies reactor maintenance.
- Designed to leverage existing nuclear waste streams as valuable fuel resources.
- In 2028 the FID is planned for the construction of the Nuclear demonstrator and in 2032 the FID of the FOAK.
